

NETWORK SERVICES

WIRED FOR BUSINESS

Network Services

Our Network Services offer a progressive approach for your digital requirements.

Specialising in the installation of all types of communications cabling schemes, with extensive knowledge of both Fibre optic, Cat5e, Cat6, telephone block wiring, Audio Visual and legacy cabling networks.

This extensive knowledge base enables our operatives to provide consultancy and engineering services relating to the upgrade of cabling schemes, communications rooms, telephone frames and patching centres.

We also provide project management services and can deliver fast reactive support, adapt and improvise for your moving requirements and changes associated with office reorganisations.

Additional Services

We also supply services relating to Communications Networks which include the installation, programming and upgrade of LAN, Telephony and Wi-Fi Networking hardware.

Our senior engineer has over 25 years experience of working within project management roles in the communications networking arena, and along with of our support engineers, are all highly trained by manufacturer and leading UK training agencies for various cabling, telephony, LAN & Wi-Fi networking products.

Our Network Services are approved suppliers to major organisations such as the London Borough of Hackney, Level 3, Ericsson's, The Crown Prosecution Service, Harrow Colleges and more.

Refurbishments & Space Planning

Internet connectivity is essential to the tenant experience in office buildings. The trend towards smart building technology means that commercial real estate developers must plan for the future. That's why choosing the right installer is so vital. Building to high standards ensures your premises are techproof and ready for the next generation of business requirements.

Avoid future retrofit costs for next-generation technology

Design

Incorporate our cutting-edge design specifications into your project so that your asset is constructed for the changing technology needs of occupiers now and tomorrow.

Attract and retain Talent

Demonstrate to your team that your wired infrastructure will support their current and future needs. Demonstrate your understanding that digital connectivity is core to the worker experience.

Optimise the build design process

Provide your design team, architects and engineers with clear guidelines for digital infrastructure, planning and design that are currently employed by the top global developers.
